FAWCO Target Program 2019 - 2022

HEALTH:

Empowering Women and Girls by
Ensuring Healthy Lives and Promoting Well Being

Women's Health

.....health programs that address gender barriers improve development programs overall. ***When women are educated and can earn and control income, infant mortality declines, child health and nutrition improve, population growth slows, economies expand, and cycles of poverty are broken.***

- US Aid

Women's Health

In many societies, women and girls are disadvantaged by discrimination rooted in sociocultural factors. For example, they face increased vulnerability to HIV/AIDS.

Sociocultural factors that prevent them from quality health services and best possible level of health include:

- unequal power relationships between men and women;
- social norms that decrease education and paid employment opportunities;
- an exclusive focus on women's reproductive roles; and
- potential or actual experience of physical, sexual and emotional violence.

Poverty tends to yield a higher burden on health due to, for example, feeding practices (malnutrition) and use of unsafe cooking fuels (COPD).
